Target version:	10.0		
Resolution:			
Description			
<p>- Currently, further information for structures (RCSB, CATH, SCOP, iHOP) are provided as links. They are available in the <i>Dataset Manager</i> checking only if the structure label looks like a PDB ID.</p> <p>- In a future version, the user should be able to select in the <i>Calculation Manager</i> which sources for additional information he/she wants to query. This should be done as parameters to the <i>Structures</i> task. All results should be available from the <i>Structures Manager</i> or a specialised manager providing all available information regarding one structure.</p>
