Category:	ProCKSI/local		**Estimated time:**	0.00 hour
Target version:	10.0			
Resolution:				

Description

  - Currently, all required output files from different tasks (similarity matrices, pictures, ...) are entered without any reference to their ancestors.

  - In a future version, all output files that are derived from one parent (pictures, contact maps, further information, ...) should be entered into the database maintaining this connection. This helps to keep track of each result without guessing where it comes from according to some potential file naming convention.

  - XML output needed!
