Category: ProCKSI	Estimated time: 0.00 hour
Target version: 10.0	
Resolution:	
Description	
<p>1. Business logic should be taken out from CGI scripts and put into separate classes so that these can be used by background processes and front-end processes (!NewExperiment and MyExperiment).[[br]][[br]]</p> <p>2. Standardise CGI Scripts with the same functions:</p> <ul style="list-style-type: none">- saveInputData(), checkInputData(), validateInputData()- createTemplate(), addDataToTemplate, createBlueScreen()- createOutput(), saveOutput(), readOutput()- printOutput <p>Handling must be different depending on with/without Session, with/without Messages, with/without CGI, with/without Request</p>
